 AKVA Fusion®

AKVA control app 2.0

Secure and optimize all of your raw data. The AKVA control app takes away the need for paperwork and is an investment for the future.

 Have all your daily registrations at your fingertips. No need for network connections, do your registrations now and upload data later.

AKVA control app facilitates daily registration of:

- Fish Sample: Weight, length, lice count and amoeba score
- Feeding
- Environment
- Mortality
- Culling
- Cleaner fish: Feeding, mortality and culling

Works on all handheld devices

AKVA control app, created specifically for the technicians working on land or at sea.

Three supported languages:
 English, Norwegian & Spanish

Secure and optimize!

- Secure your raw data
- Efficient, faster and optimized
- New API - new security system

The AKVA control app will remove the need for paperwork, which can be a cause for both errors and insecurity.

The app is easy to access and with our user-friendly design, data is sent directly to AKVA fishtalk. Register in real-time and increase your data quality. AKVA control app is a timesaving and intuitive tool that is an investment for the future.

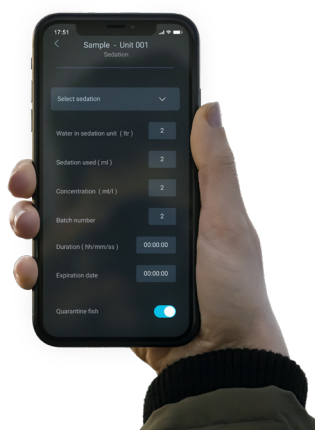

Digitize your organization by moving your staff over to a new digital platform.

New highlights:

- Adapted for both land-based and sea-based fish farming
- Offline mode
- Brand new design
- Weight samples and lice samples including AGD
- New security system, and user-login

Other key-features:

- Registrations are sent directly to the AKVA fishtalk database
- Scannable QR codes from AKVA control app
- Compatible for both IOS and Android
- Registered lice samples are saved in PDF format

Developed solely on customer feedback.

Our app is developed solely on feedback from our valued pilot customers. This means that all functionality, colours, icon size, texts and buttons are optimized and will work as they should regardless of challenging environment or weather conditions.

The app also differentiates its setup between land-based and sea-based locations, implying that land-based users will not be bothered with lice and cleaner fish registrations.
